Step3 -

- i. Head over to Sheet1
- Open Macro's Window, & Select the Macro "BringDataTOclean" ii.

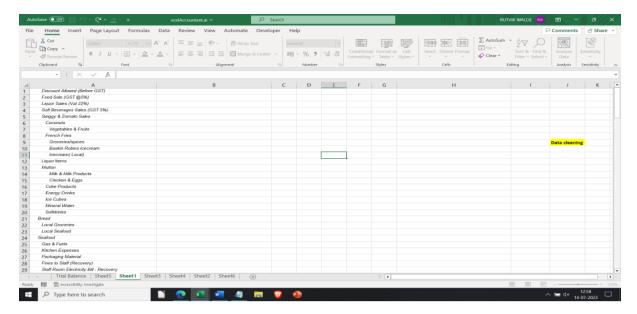

- iii. Select the Macro
- Click "Run" iv.

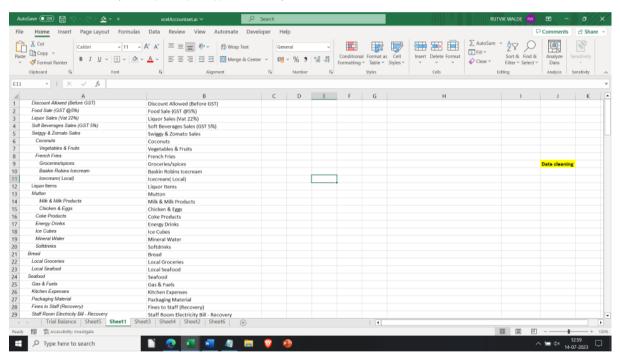

What will happen after Running the Macro?

Ans - The Macro will run several macros which will -

Copy the col B from the Sheet5 and paste into the col A of Sheet1

• The copied data will now be processed, and all the Spaces will be replaced by a Normal Space (Chr (160)) and output will be seen in col B.

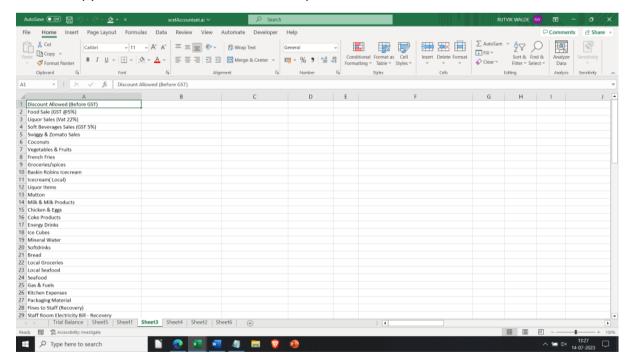

Step4 -

- i. Head over to Sheet3
- ii. Open Macro's Window, & Select the Macro "CategorizeandFind"
- iii. Select the Macro
- iv. Click "Run"

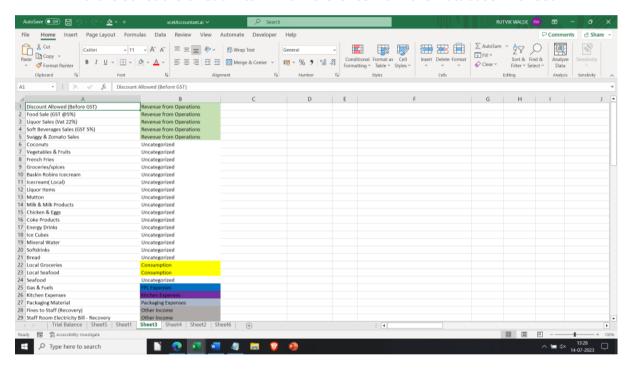

What will happen after Running the Macro?

Ans - The Macro will run several macros which will -

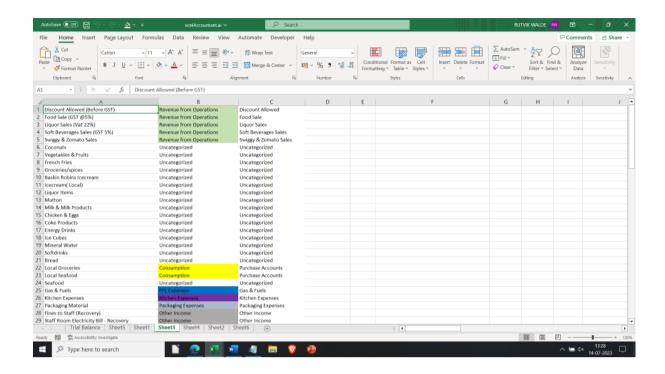

• Copy the col B from the Sheet1 and paste into the col A of Sheet3

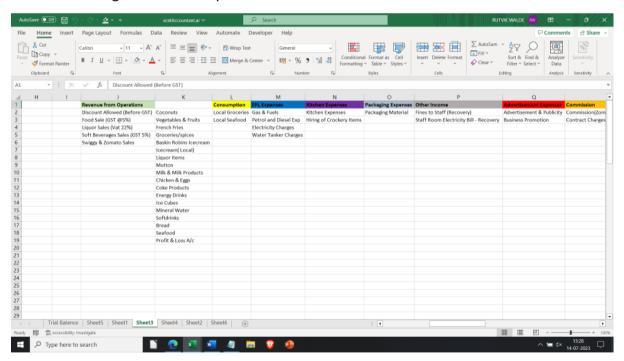

Find the Schedule of each item with reference from the Database in Sheet2

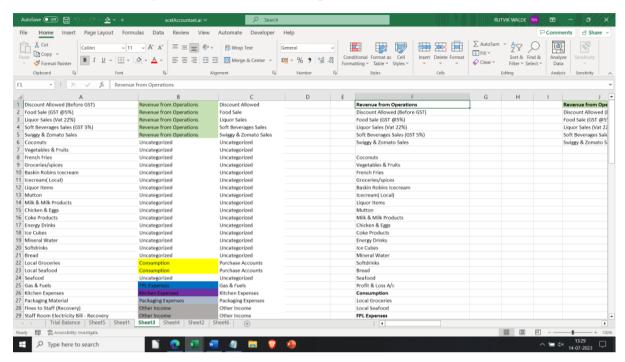

• Find the Sub - Schedules of the items with reference from the Database in Sheet6

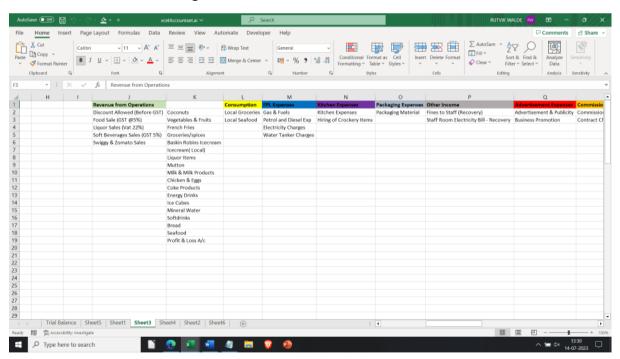

Rearrange the Items as per their Schedules

· Combine the processed data into a single column

· col K has the Uncategorized items in it

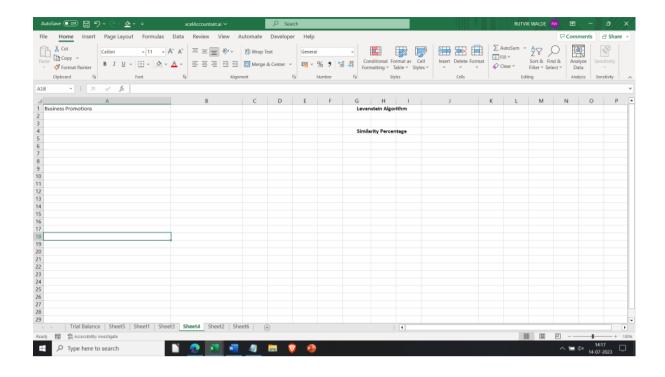

Step5 -

- i. Head over to Sheet4
- ii. Open Macro's Window, & Select the Macro "CalculateSimilarityPercentage"
- iii. Select the Macro
- iv. Click "Run"

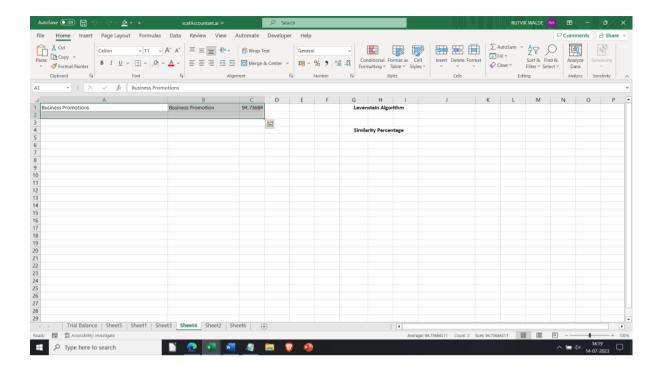

What will happen after Running the Macro?

Ans - The Macro will run several macros which will -

• Compare the items pasted in the col A with the Database in Sheet2

 Compare the items in the col A with the Database in Sheet2 and give the Similarity Percentage

Errors -

- Excel may get hanged as it has to process a lot of data at once.
- Always ensure that the Raw data is as per the format.
- Make sure to head over to the Specific sheet where the particular Macro has to Run.
- Sheet2 and Sheet6 has the Main Database ,keep the Category Name in the Header and the Items in below it.
- In case an error comes up, debug with ChatGPT (it will take lesser time that way (2))
- Line-by-line explanation of each Macro is present in the Macro code itself, refer it for any changes need to be made
